DETAILED ACTION

This communication is in response to amendment filed 12/19/2007.

Response to Amendment

The amendments include:

Amended claims: 1

Non-changed claims: 2-7 and 10-28

Canceled claims: None

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Please amend claims 18, 23-24 & 27 as follows:

The word "method" has been changed to read –system--

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to teach or suggest the limitation of independent claims. The Applicant has claims a stock trading system with automatic trades based on triggers and external market data.

Independent claim 1 discloses an automatic method of communicating stock trading orders to a marketplace including automatic communication a trade order based upon a contingent trade with a trigger criteria which monitors external market data.

Independent claim 10 discloses an automatic system of communicating stock trading orders to a marketplace including automatic electronic communication a trade order based upon a contingent trade with a trigger criteria which monitors external market data.

Independent claim 19 discloses an automatic system of communicating stock trading orders to a marketplace including automatic electronic communication a trade order based upon a contingent trade with a trigger criteria which monitors external market data, the market analysis software interface being configured to receive a trade decision from the market analysis software.

The following prior art references have been deemed most relevant to the allowed claim(s):

Steidlmayer et al. (US Pat. 5,454,104) teaches a system for controlling data streams. This data is continuous sequence data with study results. The system includes a data stream source, interface and means for constructing a database for continuously developing data and displaying the data in a horizontal display, software and hardware. The results are displayed in a “vertical pipes.” The system is flexible to analyze, mode and summarize large quantities of data.

Venkatraman (US Pat. 6,477,647) teaches a stock trading system for providing trade confirmations. These confirmations are by email Internet or private networks. Also after the customer opens the confirmation a return receipt is transmitted back to the system that it was viewed.

Bednarz (NPL - “Tool Processes Finance Data on the Fly”) discloses a software the firm StreamBase Systems has released. Their software can process, analyze and act on data within milliseconds. The 2.0 version is geared for data-rich financial services business such as hedge

funds, exchanges and management firms and includes automated trading and compliance monitoring.

Claims 1-7 and 10-28 are allowed because Steidlmayer et al., Venkatraman and Bednarz references as discussed above as the Closest Prior art of record fails to teach or suggest a method of **using a conditional order with a "trigger" which is monitored with *external* market data to send an *automatic* communication for a trade order.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
